

Notions & notations of derivatives

Notions of derivatives

slope / gradient

$$\frac{\Delta y}{\Delta x} = \frac{y_1 - y_0}{x_1 - x_0} = 2$$

$$\frac{dy}{dx} = 2$$

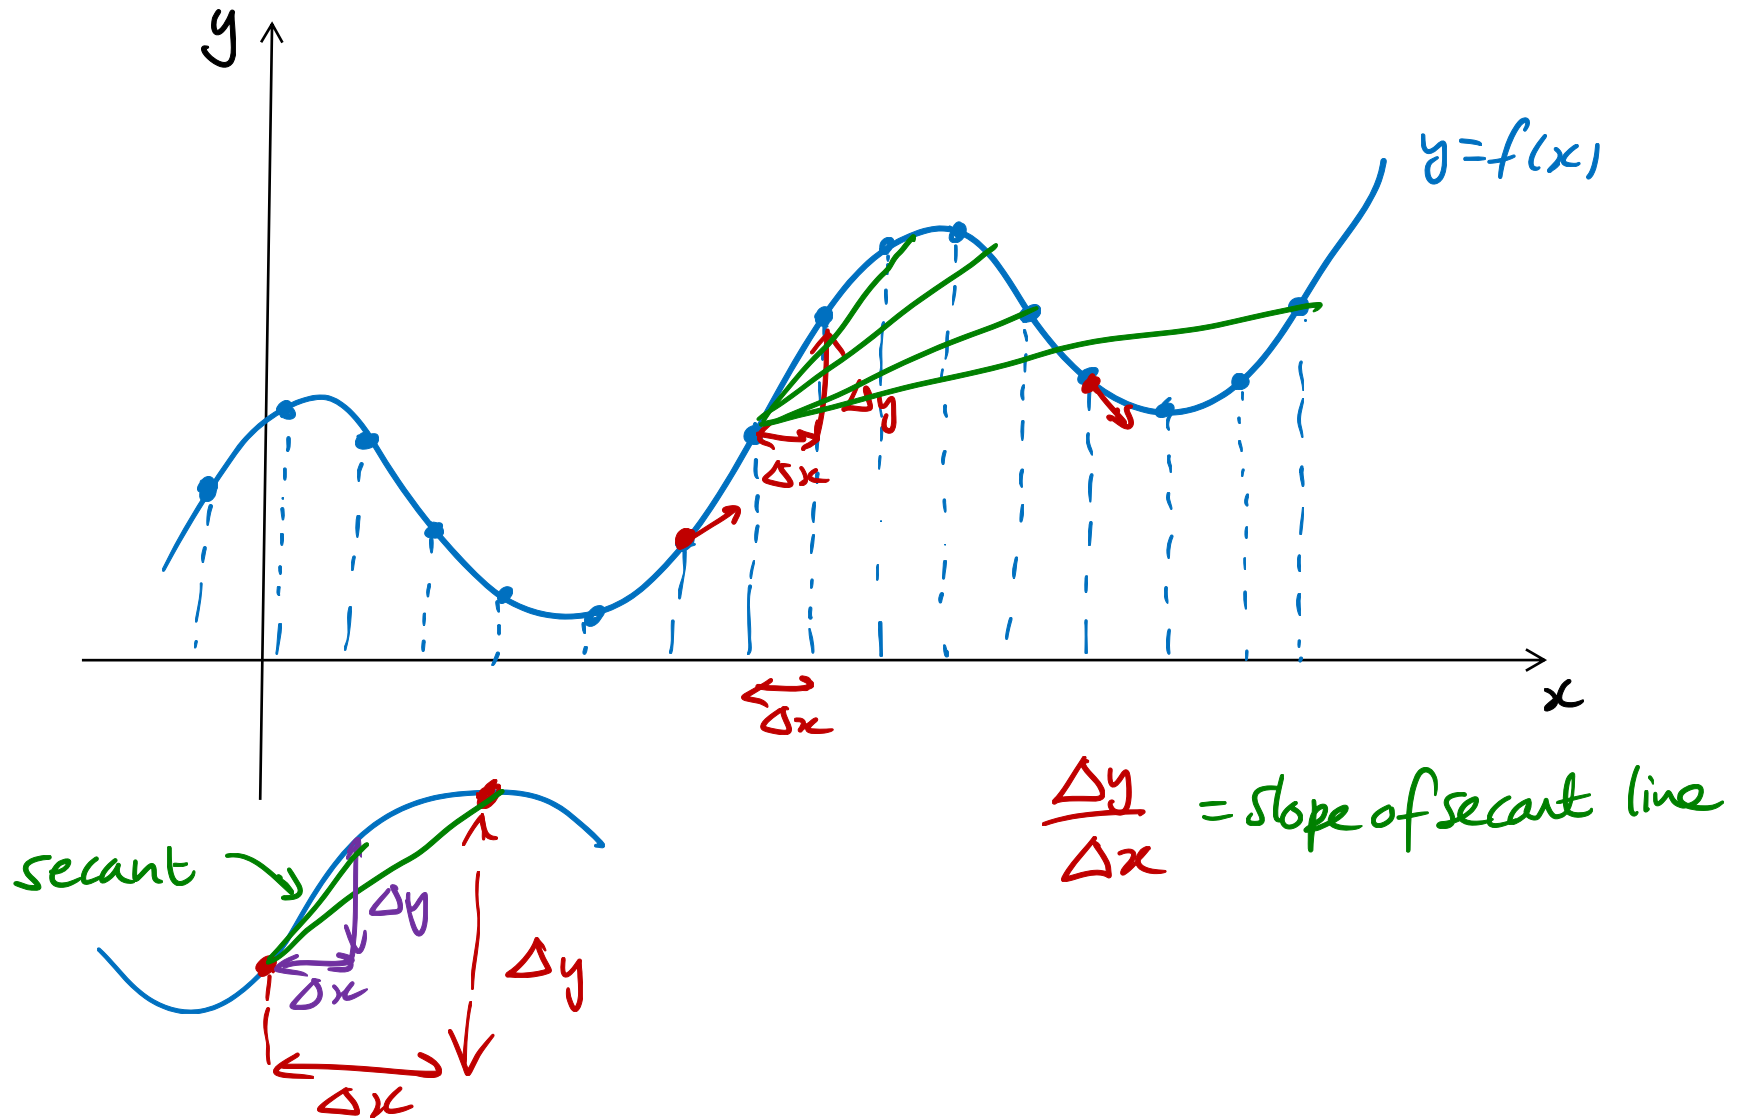

$$y'(x) = 2$$

Notions of derivatives

Notions of derivatives

Notions of derivatives

Notions of derivatives

$$f(5) = 7$$

$$f'(5) = 2$$

$$f(5.001) = ?$$

$$f(5 + \underbrace{0.001}_{\Delta x}) \approx f(5) + 2 \times 0.001$$
$$= 7.002$$

$$y = f(x) = 3x^2 + 5$$

Notation for derivatives

✓ $p(t) = 3t^2 + 5$
($t = \text{time}$)

$\times \frac{\partial f}{\partial x} - \text{partial derivative}$
 $\frac{\delta f}{\delta x}, \frac{\Delta f}{\Delta x} \text{ slopes}$
